Le Van Tung

Full-Stack Software Engineer · Team Lead

Ho Chi Minh City · 0395 959 802 · prog.tunglv@gmail.com · github.com/lvtung-dev

SUMMARY

Full-stack engineer and team lead with 4+ years building multi-tenant SaaS for retail and e-commerce in Vietnam: 2,700+ businesses on the commerce platform, 200+ on the loyalty platform. Has built 20+ product modules from data model to production, plus integrations with marketplaces, POS systems and carriers. Also ships a native macOS app, a Unity mobile game and an AI video pipeline.

EXPERIENCE

Full-Stack Software Engineer, Team Lead

May 2022 – Present

MiniAI & TMark · four concurrent products

MiniAI Commerce – omnichannel commerce platform

May 2022 – Present

Team Lead · backend, admin portal and customer app on Zalo Mini App for 2,700+ businesses

- **Built 20+ product modules:** wholesale pricing and B2B quotations, vouchers and flash sales, loyalty points, ranks and referrals, customer segmentation, booking, a spin wheel and a per-shop layout builder for the customer app.
- **Integrated TikTok Shop, Lazada and Shopee** behind one channel registry: OAuth, order and return sync, stock push, webhooks; batched Shopee mass shipping so 200 orders take 16 API calls instead of 400.
- **Kept inventory and orders correct:** stock derived from movement history, idempotent consumers, a fix for a Kafka loop that had produced 24M messages, and order auto-confirm that books the carrier exactly once.
- **Built Zalo messaging end to end:** multiple Zalo Official Accounts per shop, ZNS automation workflows and send reports, a ZBS template builder for payment requests and OTP, and per-order dedup that ended paid duplicate sends.
- **Delivered the affiliate system:** commission groups, revenue tiers, settlement, payouts and reconciliation exports, with field-level encryption for identity documents and customer phones.
- **Led platform work for a team of 3:** Prisma to Mongoose migration, a type-check CI gate, 44 Jest test files, and an admin redesign on one design-token source with an in-app help panel.

TypeScript, Node.js, Express, GraphQL, MongoDB, Redis, Kafka, BullMQ, Jest, React, Ant Design Pro, Zalo Mini App SDK, AWS

MiniAI Rewards – loyalty & gifting platform

Sep 2025 – Present

Full-Stack Developer · campaigns, points, vouchers, receipt scanning and minigames for 200+ businesses

- **Built spend-based spin rewards:** admins upload customer spend from Excel with a preview, and spins are granted by tier across branches in a transaction tested against concurrent opens.
- **Built behavior analytics:** an SDK plus server ingestion of 15 event types with deterministic IDs and anonymous-to-user identity linking; caught a cross-tenant access hole in review.
- **Built the NestJS admin foundation:** admin users, branch-scoped data and RBAC, banner and brand setup, a staff CRM, and a Docker self-host package with a Mongo replica set, Redis, Kafka and Caddy.
- **Shipped a white-label customer app** reused by every contracted brand, and acted as reviewer and acceptance gate for teammates' features.

TypeScript, NestJS, MongoDB, Redis, BullMQ, Kafka, Socket.io, React, Ant Design, Tailwind, Zalo Mini App SDK, Jest

MiniAI Connect – POS, ERP & carrier integration hub

Dec 2025 – Present

Backend Developer · sync between the platform and POS, ERP and carrier systems

- **Shipped the Sapo integration to production** (Nov 2026): 11 webhooks register on connect, Sapo follows platform orders instead of overwriting them, and warehouses print SPX slips straight from Sapo.
- **Made carrier webhooks reliable:** acknowledge only after success so carriers retry, durable logs, GHN and SuperShip cancellation, and a backfill that recovered 82 stalled shipments.
- **Fixed money bugs in Pancake POS sync:** paid orders never revert to unpaid, flash-sale discounts no longer count twice, and variant sync was rebuilt to end N+1 timeouts.

TypeScript, Express, Prisma, MongoDB, Odoo XML-RPC, cron, GitHub Actions

MiniAI Trade – B2B events & retail execution Oct 2026 – Present

Founding Engineer · event check-in, wholesale ordering and display compliance for a multinational spirits company

- **Took an empty repo to a handover-ready MVP in one week** and led development (103 of 174 commits); it ran its first live trade event with about 100 guests in Oct 2026.
- **Built check-in and ordering:** location verified on the server with a geofence and no stored coordinates, one QR for check-in and ordering, and a server-side pricing engine for tiers, Early Bird and Flash Sale.
- **Put AI photo scoring into production:** about 1,000 display photos per round scored by Claude, with Gemini and OpenAI as fallbacks; staff override a result with a reason.
- **Audited the code before client handover** (5 critical, 15 high findings) and closed the gaps; moved media to a CDN as WebP (13.5 MB to 629 KB) and kept 21 architecture decision records.

Next.js 15, React 19, PostgreSQL, Prisma, Zod, argon2, Anthropic, Gemini & OpenAI APIs, AWS CloudFront, Vitest, Playwright, Docker

INDEPENDENT PROJECTS

Sapa Pup – Unity mobile game Oct 2026 – Present

Solo developer · release planned on Google Play and the App Store

- **Designed and built a 3D arcade sled runner** set in Sa Pa: one-finger controls (bend a bamboo spring to launch, flip in the air), 5 levels of 1.5–3 km, upgrades and pickups.
- **Wrote about 7,000 lines of C#** in 55 files, covered by 94 automated tests, on Unity 6 with URP and Cinemachine.
- **Generated the low-poly art in code:** models scripted in Blender with Python via Blender MCP; batch scripts build the Android app and record gameplay.

Other builds

- **Meeting Copilot (macOS, Swift):** transcribes a meeting on device and, on a hotkey, has Claude suggest an English reply with a Vietnamese gloss; used in a real client meeting.
- **AI Video Studio:** code-driven shorts with three.js animation, Vietnamese TTS, Whisper QA and FFmpeg; 6 shorts so far.
- **English tools:** a Swift menu-bar app that reads any selection aloud with IPA, and local pronunciation scoring for Enjoy.

AI-AUGMENTED ENGINEERING

- **Authored 23 Claude Code skills** for the whole delivery loop: plan → Notion ticket → branch → PR → worklog, per-repo review gates, handover audits, and readers for Figma, web, Teams and Zalo.
- **Built acceptance harnesses:** an end-to-end runner whose fake Sapo, Pancake, GHN, SuperAI, SuperShip and Ahamove servers fire webhooks back, and a UI loop that screenshots, audits WCAG and fixes until clean.

SKILLS

Languages: TypeScript, JavaScript, SQL, Swift, C#, Python, Bash
Backend: Node.js, Express, NestJS, Next.js, REST, GraphQL, WebSocket
Frontend: React, Vite, Zalo Mini App SDK, Tailwind, shadcn/ui, Ant Design Pro, TanStack Query & Router, Apollo
Data & messaging: MongoDB, PostgreSQL, Redis, Prisma, Mongoose, Kafka, BullMQ, Change Streams
Cloud & DevOps: AWS (S3, CloudFront, CloudWatch), Docker, GitHub Actions, CircleCI, PM2, nginx, Caddy, Cloudflare
Testing & security: Jest, Vitest, Supertest, Playwright · JWT, Passport, argon2, AES-256-GCM, HMAC, RBAC
AI, games & media: Claude Code, MCP · Anthropic, OpenAI, Gemini APIs · Unity 6, Blender, three.js, Whisper, FFmpeg
Integrations: TikTok Shop, Shopee, Lazada · Sapo, Pancake POS, Odoo · GHN, SuperShip, SPX, Ahamove

EDUCATION

Industrial University of Ho Chi Minh City · Information Technology Graduated 2022
